

AMT-SYBEX Enabling Essential Industries - An Evolutionary Journey

Over the last two decades the essential industries have been through an evolutionary journey that has seen:-

- The recognised achievement of improved performance, efficiency and service levels as the expected benefits of privatisation
- The development of regulatory influence and the increasing challenges of the impacts of climate change and environmental performance
- A demand to deliver value from increasing levels of CAPEX and OPEX asset related investment to meet the sustainable performance and reliability of the asset infrastructure
- The evolution of business solutions and the move to integrated support systems driving associated technological and functional advancements
- The move to a customer led market and as a consequence continuous improvement in the vital areas of customer expectations and delivered service
- The wider involvement and empowerment of staff to ensure maximum utilisation of the valuable skill base.

The experience we have gained in working with the essential industries through this journey has meant we have built up a vast knowledge in relation to the various utility and transport market places, applications and technologies enabling us to use our Know How to provide solutions that help you meet today's challenges.

2005 - 2009

SAP

We are an accredited SAP related solutions and services partner.

Through this relationship, SAP and ourselves are working together to provide innovative, market leading solutions and services; particularly in the fields of mobile working, data exchange, integration and consultancy services.

Engineering Services

Our Engineering Services team provides support to our asset infrastructure clients which

enables significant improvements in safety management, resource efficiency and delivery quality during our client's work delivery process.

This is underpinned by a site survey undertaken by one of our experienced 'ex-industry' authorised surveyors.

EAM Integration Technology

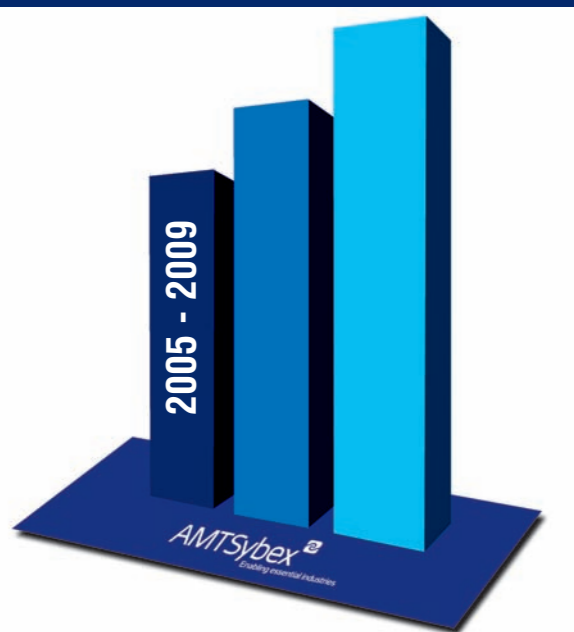

We have deployed a number of technology advancements which integrate with and are complementary to the Ellipse EAM product.

Enterprise Services allow Ellipse data to be maintained through a simplified web services interface.

Generic Adapter enables 'real time' extraction of data to and from Ellipse to any 3rd party application.

Work Planner is a web toolset for enhancing the existing planning and scheduling functions found in Ellipse.

Mincom Ellipse Reporting (MER) is a single, fully-integrated and embedded Reporting and Business Intelligence solution powered by Business Objects.

Our Products & Services

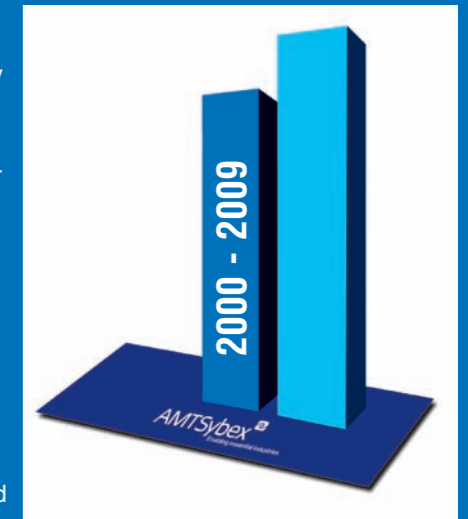

Grown From Experience

2000 - 2009

Data Transfer Solution (DTS)

In highly competitive energy markets, efficient communication between market participants is essential. With customers continuing to exercise their freedom to switch suppliers combined with increasing competition, the data transfers within the market are becoming increasingly complex. DTS underpins the management of data flows between market participants, significantly lowering costs and improving the integrity of customer investment programmes.

managing high quality data, using various mobile technology platforms. Full end-to-end integration is provided from the corporate back-end systems through to the remote field systems.

Mobile Working

We have extensive experience of providing software-based solutions for mobility in a variety of business areas including remote inspection, condition monitoring and general data collection. These solutions offer a flexible, consistent and cost-effective means of electronically collecting and

Managed Services

Through our Managed Services we provide and support hardware and/or software either as individual service packs or within a secure hosted environment. During the lifetime of that contract, the portfolio of services can be augmented with individual service packs to accommodate point in time requirements depending on the business needs.

1990 - 2009

Enterprise Asset Management (EAM)

Our Enterprise Asset Management system, Ellipse enables asset-intensive organisations to maintain and manage their assets.

We have implemented Ellipse in over 30 major asset intensive organisations in nearly two decades.

Custom Software Development

Our Software Development team develop customised solutions specific to an individual client's needs, embracing both the software and the associated procedures and processes.

Information Management

In today's competitive market place, effective management of an organisation's core data has become crucial. With this in mind, our Data Management team works closely with our clients to develop a clear vision for their overall information requirements. This approach, along with tools, techniques and the AMT-SYBEX Know How enables our clients to achieve a better understanding and superior quality of information across the enterprise.

Consultancy Services

We provide consultancy services to our clients across our market place. Our strengths come from our industry and market knowledge and experience, coupled with our project life cycle capabilities.

We specialise in Business Transformation, Technical Services, Application Support and Information Management.
