

What is Fieldreach?

Fieldreach is a powerful enterprise mobile solution designed for work and asset management.

What it does

Fieldreach empowers your field teams with a business-driven, script-based mobile environment. It enables rapid deployment and easy adaptation of field processes for inspections, maintenance, and data capture – without the need for device-side software development or IT involvement.

Through intelligent scripting, business users can define, sequence, and validate data collection workflows. This ensures accurate, consistent data capture and real-time back-office updates boosting operational efficiency and data quality.

Why choose Fieldreach

Business-driven, not IT-driven

Fieldreach puts control in the hands of business managers and field teams. With intelligent scripting, you can quickly adapt processes to meet changing business and regulatory needs, without costly IT intervention.

Built for rapid, low-risk deployment

Quick to implement: Minimal time-to-business benefit, with deployment to thousands of users in just a few months.

Low total cost of ownership: Easy to maintain, enhance, and extend by business users.

Optimised for iOS: Scripts are designed to run seamlessly across the iOS ecosystem, supporting efficient operation and long-term reliability.

Proven in demanding environments

Fieldreach has a successful track record in highly regulated industries and complex, large-scale projects. It is currently licensed for over 35,000 users and is used for the maintenance of more than 15,000 km of track, inspection of 7,600 km of high-pressure gas pipelines, and management of thousands of miles of overhead lines and water assets.

Interactive mapping and augmented reality

Pinpoint assets and verify locations before work begins.

Enable decision making

Detailed inspection and maintenance history provides intelligence to make evidence-based decisions.

Improve data control

Intelligent data capture processes enforce data consistency, compliance, validation and auditing.

The key features:

Intelligent scripting

- Business-driven, script-based workflows for field operations
- No coding required – changes made quickly by business users
- Ensures data validation, logical process flow, and embedded business logic

Enterprise integration

- Seamless integration with IBM Maximo, HE Ellipse, SAP EAM, and other major enterprise systems
- Real-time updates between field and back-office

Flexible deployment

- Available as on-premise, cloud, or managed service
- Compatible with iOS devices

Advanced field features

- Integrated mapping and augmented reality for asset location and verification
- Lone worker and geofencing support for safety and compliance
- Rapid deployment – thousands of users onboarded in months

Award-winning solution

Fieldreach is recognised for its innovation, having won a UK IT Industry “Innovative Mobile Application” award. It is trusted by leading organisations such as Irish Rail and is used internationally by mining companies.

AMT-Sybex have a wealth of industry knowledge, garnered by decades of working closely with our customers and developing their asset management infrastructure. We're here to help you every step of the way in your journey to seamless, field-based work-management. If you have questions about Fieldreach or would like to request a demonstration, please contact us at www.amt-sybex.com/contact.
